Comments: Please change your recommendation to Alternative 1. Domestic sheep are not wildlife. Domestic sheep have been proven to transmit respiratory disease to wild bighorn sheep. I watched a group of 9 bighorn ewes play on a snowfield in Idaho's Bighorn Crag. What I recall most vividly was that two of them quickly tired and coughed loudly for over 15 minutes. Not exactly the wilderness experience I was hoping for. Much worse, of course, for the sick bighorns.

Thank you for your attention.
