Title:

Comments: The High Uintas Wilderness, with its massive alpine terrain separated by 13,000-foot peaks, should be a haven for native Rocky Mountain bighorn sheep except for one simple reason: the High Uintas has more livestock grazing than any other Wilderness in the country.

Since The SDEIS fails to disclose how many native predators-such as black bears, mountain lions, or coyotes-are killed in the High Uintas Wilderness to protect domestic sheep, nor the effects continued sheep grazing has on the potential for recovering native wildlife such as wolves and grizzly bears, I oppose the High Uintas Wilderness Domestic Sheep Analysis Project (Ashley and UWC National Forests) #44503

This is Wilderness, not domestic pasture! Kick those interloper animals out.

Very simple, wilderness is wilderness. And by the law, artificially implanted sheep and other grazers are eliminated.

And the artificial killing of native species in a wilderness is clearly unlawful. Stop it now!
