Comments: I adamantly oppose the Sandwich Vegetation Management Project, USFS proposal to log 650 acres in the Sandwich Range of the White Mountain National Forest. It's truly shocking that such a seemingly dishonest plan has made it this far. The map provided has outdated road names (e.g., Fowler's Mill), indicating lack of care or research on the part of USFS. As a resident of Chocorua, I'm deeply shocked that I heard about a prescribed FOREST FIRE within HALF A MILE from my home & property not from the USFS or USDA directly but from local friends and organizations who are concerned and appalled at the project. I am concerned about a lack of buffer between this project and hiking trails, and about the danger/extinction to local flora and fauna that this un-researched project would cause. The absence of any mention of climate change or carbon storage is notable in this project, and again indicates dishonesty and a tendency to put economic gain above anything else (e.g., science, endangered species, climate).
