Comments: I'm not sure about NH ...but Vermont requires an updated Forest management plan for a landowner every 10 years.

Doing any and all loggingsure use Vegetation Management to sooth the Publicwithout regard to our changing weather patterns is short sighted ,greedy and approaching criminal malfeasance. Pretending you don't need to factor this stuff in ignores science .

I realize the Forest Service motto of Land of Many uses ,also means land of Many nt Political Pressures

Thankfully ,the White Mountains are subject to Mining and Ranching interests.

Believe me ,I am not against logging but object to it bribing done with outdated science.

I don't know the area but if there are any steam headwaters in the sector are there buffer zones ,have they studied soil structures and are they compatible with the proposal?

Thanks for creating the opportunity for input
