Comments: While I understand logging is income for USFS and that, in theory, thus is being done properly, I object to lack of a buffer space. Hiking and the history in the area to be logged runs through mt veins. That the USFS would deny not only people like me, but the recreating public access to this treasure in New Hampshire is baffling. Humans belong outside and this area can support ALL body types and in some areas have features that enable those who may fall under ADA access as well. Please be thoughtful and create a buffer zone and maintain adequate parking, too. Thank you.
