Title:

Comments: This is a bad ideal all the way around. What will it take for our elected officials to understand that Climate Change is real and not a party or political issue, but an animal and human issue. You will be disturbing precious land, water and all other natural resources. There are plenty of alternative methods for energy, solar, wind and other alternatives to be researched and implemented. We need to care for our mother earth, the animals and each other. Please stop with gas lines and all other outdated, archaic forms of energy. You are destroying this planet and all who inhabit it!
