Title:

Comments: this is a horrible idea. totally excessive destruction of habitat. This is not a smart way to avoid fires. some carefully managed thinning perhaps or even better shutting down some of these roads. Total destruction is in total opposition to your supposed mission and reason for existence.

Smarter way to avoid fires is to monitor who enters forests, educate them on fire safety or even simple refuse to allow any open fires during non wet weather conditions. Most fires are caused by humans.

The occasional lightning caused fire should be immediately observed from monitoring locations and extinguished quickly.
