Title:

Comments: I support this project. It is well planned and will reduce wildfire fuels near the Bozeman watershed. It will not interrupt wildlife due to the close proximity to the existing road and trails in the area. I am grateful for the forward thinking of the district rangers/managers for putting this project forth. Additionally, it will create a "cut back" space along the trails/roads, which makes me feel safer in black bear and grizzly habitat, as it increases visibility for both humans and wildlife. I would expect this would lead to fewer surprise encounters on both ends. I look forward to recreating on the improved area in the future. Thank you.
