Comments: this alleged fuel break of 3000 miles is not necessary. teh fact is we cannot log the hell out of all the forests for these alleged fuel breaks. i do not believe they are there for fuel breaks nd believe you are over reaching so thjat yo can log our natinoal land. we have beenoverloggins on national land for years now and the skeletal remains of forests are apparent to all. it is disgusting. trees make oxygen for us to brethe. we need those trees. i belive your actions will kill us all. you are also hurting wildlife, who now has no home to live in or food to find in that destroyed area. you are affecgting c limate when we cannot afford to destroy our climate. there are 3 good reasons why this project should nto go through. i do not trust your science. i believeit is as flawed s the cdc and nih science and pushed by politicians who are after money. i do not beli e this is necessary. another thing, sto p allowing these ele/ctric companies to put electric through our forests. they put up crap equipment tht starts fires. how many firest have been started in our forests by these electric utillties - quite a few. its time to get the electric and other utilities out of our forests. [ut them on the roads wher e peple cn see them starting. no more through middle of forests.
