Title:

Comments: The overall size of this one project spans almost one degree of latitude. Ecologically this is significant. Reducing the size of the project would increase the ability to more closely focus for best land use practices.

From the maps of proposed treatment I cannot see any areas of old growth forests. These I believe should be well delineated and removed from any treatments.

The lack of details of exactly where a management technique will be employed illustrates a lack of transparency of just how our public land will be managed.
