Comments: For the record, I am in favor of attachment #3.

Several years ago we had a field trip up McKay Creek and watched Machines do a fantastic job of cutting and logging timber on steep ground.

After viewing that and not using it on this project is disturbing. I would recommend that the USFS do what needs to be done to allow machine logging on steep ground and use it on this project..

If you need public help on this, as a member of the Natural Resource Committee, I could help.

Thank you for all your work on this and our forest.
