Comments: I am very concerned with the impact of over-snow travel on wildlife, wild places, solitude, silence and the health of forest communities. Please use the strictest criteria to protect these places from impacts from snow machines. I am a regular forest user in the winter and am constantly disturbed by the sounds of these machines, their use to high-mark avalanche pro areas and the attitudes of many operators that they can "tear it up" on federal lands. Thank you for your hard work on this important issue.
