Comments: I appreciate that the US Forest Service is making decisions regarding wildfires. I realize reducing fuel is very important. I've noticed an increase in the use of fuel breaks and just hope that these projects don't go overboard in their efforts. We need trees and we need people to understand that as we encroach into forests, we are altering an ecosystem. Fewer trees can bring in more heat and working in these areas can introduce weeds. I am always in favor of decisions that are beneficial to wild lands, plants, animals and ecosystems.
