Title:

Comments: Dear Sirs;

It some ways it seems the proposal is somewhat arbitrary. Roads and trails may or may not be good places to make fire breaks-you need an assessment of each spot.

The impacts on wildlife should be accounted for from the species level up.

Removing the tallest trees is counterproductive in terms of preventing the climate change that spurs fires as they are the best at reducing greenhouse gases.

Finally, the latest evidence on the subject suggests the thinning you propose actually increases the dryness of the remaining forest making it more prone to burning.

It is clearly an important subject of great urgency. But given the scale of the impacts both of action and inaction, the most insightful on the subject should get together and work out something better. Good luck.

Sincerely,

Eric Bare
