First name: Eleanor

Last name: Barker

Organization:

Title:

Comments: No, no, no! Why not? This project will:

1. Ruin the recreational experience
2. Damage wildlife habitat
3. Will dry out and heat up the land rather than stop fires from spreading
4. Increase the spread of noxious weeds

Also,

1. Thinning and clearing around structures is the most effective fire prevention action
2. Intact forests absorb CO2 to combat global warming

Thanks for your consideration!
