First name: Kellie

Last name: Bernardez

Organization:

Title:

Comments: This is not necessary and will cause all this:

1. Ruin the recreational experience %100
2. Damage wildlife habitat
3. Will dry out and heat up the land rather than stop fires from spreading
4. Increase the spread of noxious weeds
5. Thinning and clearing around structures is the most effective fire prevention action
6. Intact forests absorb CO2 to combat global warming
