Comments: I believe it would be beneficial if the Elbow Pond road/trails could be connected to the existing nearby Hubbard Brook Experimental Forest roads/trails on the other side of the mountain. This would expand existing hiking, fishing, hunting, camping, biking, snowmobile, ATV, snowshoeing, cross country skiing, etc. opportunities into a larger area and may reduce some of the vehicular and people congestion in the Woodstock/Lincoln area. If nothing else, this increased accessibility would enable people to spread out and enjoy a greater area of the WMNF with minor infrastructure costs.
