Comments: I am grateful that this project has been reduced to a much smaller area. But it seems that in reading the EA that there should be a lot more information collected before any areas are disturbed. Road building, heavy equipment and removal of trees will create huge, disturbed areas and will affect plant and animal life greatly in the areas treated.

My son did plant surveys for two different National forests and a BLM area this summer. I think the next step before you proceed with this project would be to do surveys as well to really understand what is in the proposed sites and how logging would affect the areas involved.

Thank you.

Doug and Kate Shreves
