Title:

Comments: I support the preferred alternative establishing an elk habitat effectiveness goal of 90% and thereby allowing fish lake trail for seasonal motorize use. Management of the EHE at the current mandated level of 100% is not possible, not realistic and not scientifically supported. Motorized use of the fish lake trail has minimal impact the overall EHE and the surrounding area. Fish lake trail continues to maintain a high quality elk habitat. The preferred alternative represents a common sense and balanced approach that provides important recreational access to one of Idahos unique natural features

Thank you
