Title:

Comments: Monarch ski are expansion will have any benefits, affecting many aspects of the skiing community and the surrounding, supporting communities. In addition it is quite likely to benefit the health of the forest and its inhabitants in the no name basin, creating greater sunlight available to trees and grasses. The forests in the Swatch range are thick with so much dead biomass I often comment that a self respecting bear wouldn't be seen in there. The development of skiing in the basin will reduce this dead biomass, and increase over time the living in my opinion. The ski runs also make for good fire breaks. The skiing experience will be well enhanced, something the skiers all would appreciate.

In addition to the expansion the enterprise needs to address the lift access to the no name basin from the main lodge, probably needing to upgrade the breezeway lift and increase its reach. In the expansion plan, I would include t-bar access to the Mirkwood basin.
