Title:

Comments: I've watched the evolution of biking in Teton Valley on both sides since the 90's. It should be cut and dry- motorized and non-motorized. Motors will only get more stealth and in more toys- what about a one-wheel? scooter? motorcycle? I don't e-bike (yet) and don't think everyone needs to be proficient in the classes of motors, which undoubtedly will evolve in time. The speed, accessibility, and safety is a different factor with a motor. Outfitters in Wilson will be renting bikes to tourists that have hardly pedaled. To allow a certain class is a foot in the door that will only allow more and more types of motors as the sport evolves. We need to put a foot down now and establish a zone free from motors. Plenty of multi-use trails around.
