Title:

Comments: Before you allow e bikes, you need to educate and manage regular mountain bikes on etiquette. Also e bikers need to understand that they do damage trails (skidding, spinning out, riding muddy trails, poor handling skills). You just can't add a significant increase in use without educating the current population of bikers, hikers and horseman. E bikers tend to be novice riders and are clueless about how their speed is totally in conflict with other users. They need this education before they are allowed on non-motorized trails.
