Title:

Comments: First , a motor is a motor - they do NOT belong on such places that people of all ages young & old, dogs, horse riders walk. It is enough that a mountain bike spins down on these living individuals. It is enough that bikes almost run over those on our bike paths. Our environment is to be enjoyed peacefully & not have interference. Why must we scare the wildlife - why must we move faster - what will come next to change our country?

NO-NO - motors do not belong in the back country - put them on the roads
