Comments: Please keep these trails human power only without any electronic device included. I don't think allowing these E bikes on trails is actually helpful at all for "older members" of the community. They should stick to their traditional exercise methods for better health outcomes, not rely on electronics. There are plenty of streets and bike paths in the town of Jackson, where people can use their E bikes, and if they are avid riders, they should definitely stick with human powered on the trails. It seems that this would be safer for people on traditional bikes as well. Thank you for your time .
