Comments: It is imperative that all logging of mature trees stop immediately and not resume until other measures have been implemented to stop humans from boiling, cooking, the earth. Mature trees contain and hold carbon, preventing it from escalating the temperature increases already begun. The science is clear. If you care about your children and their children do whatever you have to do to prevent the cutting down of mature trees. Since I moved to Carroll County NH in 1976, our region has moved from zone 4 to zone 5 for plants. Please have courage and integrity to be able to speak about the science forcefully when you advocate putting the planet's life systems above the profit gained by some thru logging.
