Comments: Yet another mature forest roadless area to be attacked by the USFS, who are the biggest threat to mature forests, old growth too, in the US National Forest system. I am against your Lost River Integrated Resource Project #63401. "Integrated Resource" is a good guise for timber extraction at a time when we need more mature forest to store and sequester carbon in this time of climate change.

Get with the science rather than try to extract as much as you can while you can. It is this type of project the will gradually get more and more of the public to want to shut you down!
