Comments: By allowing E bike use on our national forest you are opening a can of worms for future E use. Just think E ski's/skins,snowboards,climbing belay device's,hikeing boots. The crazy list could go on. But a reality you are about to have to deal with is moonbikes. They are E snow bikes used to access for backcountry sking. This is likely going to piss off backcountry skiers like the snow motorcycles already have. Now you are going to have to deal with it. By not allowing E bikes on the forest you will avert future problems for your agency. Keep them around the already developed ski areas where public lands have been destroyed for the sake of recreation. I thought the forest was all about unplugging /disconnecting and embracing the wild. The skiers and snowmobilers have always got along for the most part but this new user group will be a challenge in the future. Good luck!
