Comments: Foot rests should be added to the chair lift for people with disabilities and many people that don't have the muscles to support the weight of skis or snowboards. I have a hip replacement and it is very painful on my hip for the weight of the ski to hang for the time it takes to arrive at the top of the lift. My 30 year old daughter also finds it very uncomfortable to hang her snowboard without the foot support. Many people with weak, injured or arthritic hips, knees or ankles would benefit from foot rests. I have skied over 1 million vertical feet in 1 season so its not that people with various ills don't ski. In fact, as I stood in line at Monarch last year I overheard a conversation by 4 people about the various joints they each had replaced and they still enjoyed skiing. Please require foot rests for the ski lift chairs.

The CDT Trail has magnificent views of the proposed ski area. Please take in mind the views and minimize tree cutting and the placement of the new lift.

I support the addition of No Name Basin to the Monarch Ski area.
