Comments: The community of mammoth lakes requests formalizing safe, non motorized areas for winter recreation. South of the "tanks" or sherwin creek road to the mammoth lakes basin is now the area where non motorized use including XC, snowshoe, tele, snowboarding, AT and side country access from the sherwin range. Also the obsidian dome area are non motorized. These areas are heavily used by locals and a draw for guests who come to enjoy and take guided trips and avalanche training. Please maintain and / or increase these non motorized use areas. The access for motorized use is plentiful and easy access. Mixed use of motorized and non motorized creates challenges and danger for all involved... Additionally these off pieste sports are growing exponentially and encourage non damaging public access and use. Additional grooming would greatly benefit the community.
