Title:

Comments: I recently moved from Sonoma County. CA and I got this email, but am unable to open any attachments, which was before I entered my new address in NV.

I am interested to stay informed about the control burn plans, because it's a special environment and I love it, have friends there and want to see that it's preserved!

Given that I can't open the attachments, I can only say that I think whatever can be done to prevent the horticulture dies there have been in the state, I think it's a good idea, as long as it is done responsibly and not just hacking down a bunch of trees!

I had heard that the native Indian groups were working with the fire teams to preserve and manage the elimination of the most dangerous conditions, trees and undergrowth. I think that is wonderful.

I do think schedule for controlled burns should be sent out BEFORE the burning is done, not after people become alarmed when they smell or see the fires.

Thank you!

Holly Groach
