Comments: I believe that it is a terrible thing to cut down the old growth forest. These trees take a very long time to grow and are essential to our ecosystem. Cutting down the old growth forest, not only ruins, the beautiful forest that we have, but can never truly be replaced because it will not be an old growth forest with young trees. The forest in New Hampshire is exceptionally important to protect. There is no reason to go in and ruin something so beautiful. Not to mention when you cut down trees it kills animals in organisms living within those. Please do not cut down these trees.
