Comments: I strongly oppose this project. I believe that we should leave this area as wilderness and that we should preserve as much forest in its natural state as we possibly can. After attending the Town Select meeting in Sandwich, NH, which hosted the USFS, it was clear to me that the USFS was not taking a holistic view of the whole region, surrounding private and other public lands, and only takes a fragmentary and inchoate perspective on the impact that the project will have. Also not a fan of the sophistic and 'having it both ways' arguments put forth by USFS when it comes to a number of issues that were brought up, such as the use of toxic herbicides. I have reviewed the environmental assessment and was disturbed by the lack of detail. Considering the multiple projects taking place in other regions of the WMNF, I am still more concerned about the scale of the reckless and poorly researched proposed actions put forth by the USFS when you consider the implications of the total impact of all logging, burning, and management projects. I stand with many others who care deeply about preserving our planet and its natural resources for future generations.
