Comments: I understand the necessity of this program, but there are some health problems that should be taken under consideration. On Thursday, October 19, 2023 I was in Yosemite Valley for a visit along with my family. There was a prescribed burn near the entrance to the scenic part of the valley. I did not open windows as we drove by the burn or walk very close to it, but I had problems with my asthma for the next 12 hours even after descending home to Modesto. Not until we entered the Valley did we see any notice of prescribed burning in that location for that day. Maybe it was available somewhere, but no one in the family saw it before we had driven over 2 hours to get there. I am fine now, but it seems to me that a prescribed burn notice should be posted in some way for people who have trouble breathing with smoke in the air.
