Comments: I do not support the usfs proposal to allow e-bikes on Teton pass. This will increase contents at trailheads, and significantly damage the user experience at a traditionally popular human powered recreation destination. E-bikes will take inexperienced users farther into the backcountry without the experience to take care of themselves, and it will increase speeds on trails making recreation more dangerous for everyone. Please reject the forest service proposal, don't let e bikes on trails around Teton pass, a popular non-motorized recreation area.
