Comments: As an avid mountain biker who supports wheeled forms of transport, I do not support Ebikes in terrain where non motorized bikes are allowed. Ebikes move at a different speed than normal mountain bikes and this can create problems on the trail. Also, there are a myriad of places that ebikes can already ride...however, there are very few places that are traditional mountain bikes only.

I would like to see traditional mountain biking areas remain the domain of human power.

If you need to have a pedal assist, then you can ride bikes in areas that are not strictly human powered. We need to maintain areas where mountain biking is still pure mountain biking.

Thank you for the consideration.
