Title:

Comments: Thank you for this opportunity. I support the additional suitable timber acres that will give flexibility in choosing projects and also in fighting wildfires. I appreciate the attention paid to watershed health. I appreciate the incorporation and consideration of previous comments to the Plan. Under the general heading of

multi use, is the Plan sufficient and consistent with the Planning Rule regarding the relationship between desired conditions and objectives with regard to timbering? Specifically, should objectives be added to the Socioeconomic and Partnership sections, and shouldn't the objective in the timber section correlate with the desired conditions? Also, was the motorized community fully engaged in this process or

should there be more outreach to bring them to the table? I realize the format of these comments may not be as polished as they should be, but I am an ordinary citizen, not representing any organization. Thank you.
