Title:

Comments: It seems that this proposal only benefits a small portion of the population. And this at the cost to the balance of the population, wildlife and the environment. Mountain Bikers already usually adversely impact the world of the hiker, the horseback rider, wildlife, and have led to more erosion of the trails. Many hikers and horse riders no longer use many of the trails they once enjoyed. Allowing ebikes would only increase these impacts and might open the door to arguing ebikes to motorized equipment. This proposal does not seem to cater to multiuse.
