Comments: Fully support use of light assistive mountain bikes on USFS trails. There are reasons - age, fitness, injury, disability, body mass - that individuals may want or need to use a Class 1 bike to access public trails. it is common for locals to argue that individuals should be fit enough to ride single track trails. This is discriminatory and "ableist". Some people simply have conditions that prohibit them from accessing trails without some assistance. This technology allows them to participate.
