Comments: To Whom It May Concern,

I don't know how well these fires would be managed or if these pieces of land would be burned and watched/monitored/controlled as they are conducted but I do see the need for brush control and control of naturally decaying vegetation, considering the drought in California over the past years. However, logging in these areas should not be allowed!!! A controlled fire situation can be of value so that in the future a wildfire would not get out of control and destroy much more. Yes, small areas can be control-burned but that should be the extent of man's interference with nature. Leave the burned trees, etc. , to replenish the future growth. NO HARVESTS! Thank you.

Jerry Hughes
