Title:

Comments: We have just had the hottest October in history.

The NFS lands must be kept as wilderness, with no additional development of wells, roads, and fossil fuel production.

The oil/gas infrastructure we already have is redundant because we have reserves that exceed our projected possible use by at least 40%. Expansion of capacity is a bad investment. Billions of dollars worth of destruction and loss of life are occurring yearly.

Fossil fuel use must be curtailed in order for life to continue on Earth. We can't meet the 30/30 or 50/50 goals unless we preserve and expand wilderness.

"In Wilderness is the preservation of the world."
