Title:

Comments: I respect the ability to practice firearm safety and target shooting skills, but unfortunately, this user group has consistently had a sub-population that disregards safety, litters the forest with spent casings and fractured targets, and destroys fauna and flora. I support a plan to build new ranges and limit target shooting to those ranges. This is a common sense alternative to the current situation: it respects the rights of the user group while protecting other forest user groups and the forest itself.
