Title:

Comments: I strongly object to the FONSI. As I stated in my previous comments, the potential impacts to groundwater, wildlife (possible threatened or endangered species), recreation, etc. are significant to the residents of this area. Should the exploratory drilling lead to the discovery of gold then Solitario Zinc will be requesting a full-scale mining operation, which could irrevocably change the landscape of this area, as well as affecting surface water, ground water, wildlife, recreation, cultural sites, and air quality.
