Title:

Comments: I respectfully enter my objection to any increase in motorized use within any part of the forest. Motorized usage noise often carries multiple miles, disturbing wildlife and humans who seek peace and quiet. Exhaust and increased trash are two other impacts. There are hundreds of thousands of miles of access roads for motorized use within our forests and enough is enough.

Thank you for increasing Designated Wilderness acres and protecting ALL current old growth while creating many more areas where old growth stands will be allowed to form. Thank you for prioritizing and protecting wildlife and Native American interests. Thank you for doing what you do!
