Comments: There is no air quality related EJ information although the SocioEcon analysis shows that there are areas / communities adjacent to the TDW area that are more vulnerable (at or above 80th percentile threshold) to environmental (including air quality) impacts. Recommend using EJScreen to determine air quality specific index values for these adjacent areas (describe in the Affected Environment) and briefly discuss the benefits (if any) that could occur for these "sensitive" areas for withdrawing Federal oil and gas leases (describe in Environmental Consequences).
