Title:

Comments: I strongly object to this project. My well is ~2000 ft deep and is located at a lower elevation from the proposed drilling. We need to be 100% guaranteed that pumping extra water into the ground at these sites or any activities will NEVER affect our future water supplies. This potential for contamination must be prevented at all cost.

The proposed requirements for their operations drivers to abide by specific speeds in the area will never be followed. Where are provisions for enforcement of that to maintain safe roads for all the residents during the operations?

The people dont want this and are speaking out. I sincerely believe the outrage would be heavily multiplied if notifications were not using last century methods publishing to a newspaper. In an age of technology driven information, newspapers should be abandoned and are no longer an effective means for mass notifications of people for what is being proposed.
