Comments: Hacing spent alot of time in the wilderness areas hiking and climbing. While climbing, it is always appreciated to find solid rap anchors while descending. Having fixed anchors provides fast and safe travel over exposed terrain. By removing these bolts/anchors will make it more hazardous weather going up or down for climbers of all skill levels, which may lead to more accidents and more resources involved in rescue services. Please help preserve the anchors so that the next generations can enjoy the elevated experiences and pààerspective of the Wilderness.
