Comments: The remaining old growth forests do not belong to the current economy, or government, they are the legacy of future generations! Destroying invaluable genetic resources & biodiversity for short-term economic industry is foolish, look at where it has gotten us, with climate & water issues threatening our very existence. Every forest is home to uncountable species, from fungi to birds, to the fish in the streams. Old growth is the most diverse habitat of all.

'If we surrendered to earth's intelligence we could rise up rooted like trees.' ~ Rainer Maria Rilke
