Comments: Keeping these wild lands free from roads & allowing the lands that aren't old growth forests to some day become that. So few places on the earth now are untainted by the impacts of humans & I believe we need to do as much as we can to keep this area as pristine as possible. To care for the land, waters, air, animals, plants, fungi & all of the other unseen & unknown parts of the cycle of life in it's purest form is why I want this land to be protected for future generations. So future generations have a this to pass on in perpetuity.
