Title:

Comments: Prohibiting and removing fixed anchors will cause safety issues, without proper anchors or bolts route climbers run the risk of severe injury and possibly death, having established routes guarantees the climber a safe end point to their climb and keeps them on route from climbing into potentially dangerous or fatal scenarios. Additionally removing bolts and anchors would wipe clean a huge portion of the rich climbing legacy of the United States. Practicing safe climbing with the use of bolts and anchors allows park visitors to experience the beauty of the land that hiking cannot match.
