Title:

Comments: Dear U.S. Forest Service:

Please do not allow logging in old growth forests and limit or eliminate logging in mature, slightly younger forests. Please minimize or stop the thinning of forests by intentional fire because of its horrible collateral damage to wildlife and the ecosystem.

We must preserve as many trees in our forests as possible. These trees absorb carbon pollution that drives catastrophic climate change. And forests and trees provide homes for precious wild animals.

Thank you for preserving our forests!

Susan Fong and Family
